

FOR OUR PARTNER CLINICS

Refer your patients for monitoring in Sweden

Everything you need to refer a patient to us for ultrasound monitoring and blood tests during treatment with you – including your clinic's personal code.

YOUR CLINIC CODE

Trianglen10

Share this code with your patients. They receive a **10% discount on their consultation**, and it lets us see the referral came from you.

What we do for your patients

Ultrasound monitoring

Follicle & endometrial scans by a doctor, at our Stockholm clinic.

Blood tests & hormones

Hormone monitoring with lab referrals, timed to the patient's cycle.

Coordination with you

We align with your protocol and coordinate with you. Results go to the patient.

Sperm analysis

The **classic sperm test (2 200 kr)** measures sperm count & concentration, motility, and morphology. The **extended test (3 800 kr)** also measures oxidative stress.

Coming September 2026: sperm DNA fragmentation testing (SDFR assay).

How your patient books – three steps

1

Book a consultation

The patient books online, enters your code **Trianglen10**, and adds your test protocol in the booking. Consultation by phone or at our clinic in Stockholm or Göteborg.

2

We plan the monitoring

A nurse or midwife reviews your treatment protocol and plans which tests and scans are needed, and when.

3

We book & send referrals

We book the scans and issue lab referrals. Results are delivered to the patient, who has a named contact throughout.

Costs

Consultation for treatment abroad

By phone or at our clinic in Stockholm or Göteborg · with a nurse or midwife

1 200 kr

Ultrasound (Stockholm)

Follicle / endometrial monitoring, performed by a doctor

1 900 kr

Blood tests

Priced individually, quoted after the protocol is reviewed

Added separately

Prices in SEK. Blood-test and lab costs are added on top and depend on the analyses requested. Please note: a few tests cannot be carried out with us (e.g. chlamydia and cervical/cell samples).

Scope & privacy

Our role. Fertilitet Plus handles referral management and coordination of sampling. All medical assessment and interpretation of results remains with the responsible physician at your clinic. Results are delivered to the patient.

Data protection (GDPR). We cannot receive medical documents or personal data by email. The protocol is shared during the consultation and in the patient's booking.

Questions about a referral?

Your patient books online – we take it from there.
